

Project report

Design and implementation of FTP Client

Course Title: Internet Application

Name: Name of Student 1 (Student Number)

Name of Student 2 (Student Number)

Date: _____

1. Overview

The requirement and target of the project is introduced.

2. Requirements Analysis

The requirement of the project is analyzed here, including,

- Development Environment, such as OS and programming language
- Functional requirements in details, including task decomposition and analysis

3. Preliminary Design

Preliminary design includes

- Decomposition of functional modules
- Relationship and interface between the modules
- Overall flow chart
- Design of data structures

4. Detailed Design

Detailed design includes

- Design analysis of each module
- Flow chart of each module

5. Results

Show the execution results with Screen Shot.

6. Summary and Conclusion

Specify how you divide jobs with your partner and your jobs in the project. Self-evaluation of your work is given here, including future improvement.
